B2B - B2C

E-COMMERCE

B2B -B2C E-COMMERCE

- Allowing businesses to conduct orders and transactions 24/7 from anywhere in the world.
- Generate valuable data and analytics, providing insights into partners behavior, preferences, and market trends.
- Real-time inventory tracking helps businesses manage their stock levels more effectively, reducing the risk of overstock or stockouts.

Inventory

Management System (**IMS**)

INVENTORY MANAGEMENT SYSTEM (IMS)

- Essential for tracking stock levels & ensuring product availability, classifications and preventing stockouts or overstocking.
- Provides real-time inventory level tracking.
- Ensures businesses never run out of essential stock.
- Provides real-time visibility for improved inventory prediction & management.

Warehouse Management System (**WMS**)

WAREHOUSE MANAGEMENT SYSTEM (WMS)

- Crucial for tracking inventory & managing warehouse operations.
- Cloud-based SaaS WMS offers easy access & use without the need for personal hardware and software.
- Enables implementation & customization, with data accessible from anywhere, anytime.

Fulfilment System

FULFILMENT SYSTEM

- Automates order fulfillment, optimizes inventory management, & streamlines delivery routes.
- Reduces failed shipments, improving cost-effectiveness for businesses of any size.
- DMS simplifies scheduling, dispatching, & real-time tracking of deliveries, enhancing customer service with automated notifications & visibility.

Delivery Management System (**DMS**)

DELIVERY MANAGEMENT SYSTEM (DMS)

- A Delivery Management System (DMS) streamlines delivery scheduling, dispatching, & tracking, offering automated notifications for updates or delays.
- It improves customer service by providing real-time visibility into deliveries, keeping customers informed about order status & expected delivery times.

Unified Growth System

UNIFIED GROWTH SYSTEM

- Including CRM, Customer Ticket System, Project Management , KPI's Tracking
- Manages & optimizes leads interactions, storing & tracking customer information.
- Enhances customer satisfaction, sales, & retention.
- Provides real-time leads data & insights for better sales opportunities & personalized experiences.

Human Resources

(HR)

HUMAN RESOURCES (HR)

- Automate repetitive tasks like payroll processing, leave management, and attendance tracking.
- Reduce administrative overhead by allowing employees to handle routine tasks.
- Generate customizable reports for HR metrics, helping businesses track and improve performance.

Financial System

FINANCIAL SYSTEM

- An ERP system integrates business functions like customer invoices, vendors bills, accounting, products to enabling streamlined operations and improved efficiency.
- Using ERP automates processes, & a SaaS ERP system enhances business performance, facilitating data-driven decisions for an improved bottom line.

Manufacturing System

MANUFACTURING SYSTEM

- Comprehensive manufacturing suite covering planning, production, quality control, & inventory management.
- Facilitates creation and management of production processes, tracking of operation stages, & monitoring of inventory levels.
- Assists in tracking expenses & supports production planning & scheduling for efficient demand fulfillment.

Fleet

Management
System (**FMS**)

FLEET MANAGEMENT SYSTEM (FMS)

- Assists in managing & optimizing fleet operations, dispatching, & vehicle tracking.
- Improves safety standards by monitoring location, speed, & driver behavior.
- Features like geofencing for area-specific alerts & maintenance reminders enhance management.

ERP System

ERP SYSTEM

- ERP software streamlines organizational functions, enhancing efficiency & enabling informed decision-making through centralized management.
- ERP automates tasks, optimizes resource management, improves planning with a holistic view, & enhances customer satisfaction through faster responses & personalized services.
